

Fall 2024 Curriculum Packing Events

At Science Club for Girls, we are dedicated to providing hands-on, experiential STEM education to girls and gender-expansive youth. Our corporate partners are critical to ensuring our clubs are well-equipped with materials needed to deliver engaging and impactful curriculum. We invite companies to join us in this mission by supporting our packing events through sponsorship and volunteering.

During a packing event, employees will have the opportunity to learn about our engaging STEM programming. Your company's involvement not only supports STEM education but also offers valuable team-building and community engagement opportunities for your employees.

About the Fall 2024 Engineering Curriculum:

This unit introduces participants to engineering design and technique on a global scale. Participants evaluate unique engineering feats from around the world and engineer models to replicate these achievements. Highlights include creating water filtration systems, building pyramids with sugar cubes, and constructing a replica of the Eiffel Tower. This unit also incorporates discussion of human geography, interweaving the physical and social sciences.

NOTE: Packing events take place at the Science Club for Girls office unless otherwise noted.
